ABOUT THE SEMINAR

Crime is a term that is used to refer to the commission of a wrongful act or criminal incident. When it comes to cybercrime, can be defined as a crime committed by the Internet. Cybercrime, cybercriminals Cybercrime is a criminal act that is committed by using computer equipment or any other smart devices through the Internet. Hackers or criminals have different motives to commit this crime. They can do this to harm an individual, an organization or even the government. Cybercrime is a criminal activity in which fraud is done through a computer, network device or network. Cybercriminals take away from privacy to money through this. The purpose of the seminar is to stop all the crimes like data hacking, phishing mail, OTP fraud and mobile fraud, and extortion, which cyber criminals commit, in cybercrime by running public awareness campaigns. The continuous increase has to be stopped. Many times people unknowingly commit a cyber crime or become a victim of it. Awareness is the biggest weapon to prevent cybercrime. In the seminar, various measures to prevent cybercrime will be discussed in detail. Ex: We all should be careful in the use of mobile. Do not share any of your personal information like Aadhar card, PAN card, bank passbook etc. in the use of social sites. The tradition of updating status on social sites is very wrong. Try to avoid it. Many times over the phone, information is given by thugs to win offers and big money, in which people often share their personal information by getting caught in greed. Due to this, the thugs clean their hands on the money deposited in your accounts. It is impossible to get this money back. Women's helpline 1090 is being run by

the government for the safety of the girl child. You can register any complaint by calling on this. In this, the identity is kept secret. Thugs can be avoided only by the awareness of all the people. OTP or necessary document information is never asked for by the bank. So do not trust any call. If there is any problem then contact the bank branch directly for the same.

Different types of cyber security will be highlighted in the seminar.

Network Security – Protects the network from being attacked by malware and therefore always use a secure network.

Cloud Security – Cloud resources provide tools to protect data.

Information Security – Helps to protect data from unauthorized or illegal access.

End-user security – The user should be alert while inserting any external device into the system, and opening any mail or link.

Application Security – Helps to keep the system and software free from any threats.

Conclusion

Cybercrime is spreading its feet day by day. The best way to stay safe from falling prey to its ill effects is to follow safety measures. There are many ways by which we can protect our confidential information from leaking. However, we should always focus on awareness, because 'prevention is better than cure, especially when treatment is not available.

Be yourself and be smart and proactive to protect your identity and important information from theft.

With the knowledge of vigilance and technical resources, we can contribute to the prevention of cybercrime. The cyber awareness campaign is a commendable step taken by the government in the direction of stopping cybercrime. Make it a success by taking a pledge to prevent it.
